

Actiferol Fe Forte

Openable capsules

Food for special medical purposes.

For dietary treatment to ensure proper supply of iron and in states of iron deficiency and anemia for pregnant women, children above 12 years old and adults.

Iron is a microelement required for proper development and functioning of body. It contributes to proper development of cognitive functions in children. It contributes to the proper creation of hemoglobin and red cells which is really important for the growing body of a child. It helps in proper functioning of immunity system. It is an ingredient of hemoglobin which conditions transport of oxygen.

Actiferol Fe[®] contains unique form of iron put under micronization and emulgation. Thanks to micronization, i.e. great fragmentation, absorption of iron from iron pyrophosphate (III) is twice as high which is confirmed by researches. Iron contained in Actiferol Fe[®] is liberated in intestines, not in stomach. Thanks to that, there are no afflictions connected with digestive system.

Folates help in proper blood production and take part in the process of cell division. Active folate is well absorbed and ready to be used by organism. Active folate secures people who have problems with absorption of folates from the standard folic acid.

Content:

Ingredients: iron (ferric diphosphate (ferric pyrophosphate); maltodextrin; emulsifier: lecithins); pteroylmonoglutamic acid (folates: folic acid); calcium-L-methylfolate (folates: active folate). Capsule shell: gelatin; colour: titanium dioxide.

Nutritional value	100 g	Recommended daily intake-1 capsule
